

IAgrE Mission Statement

1. Background to IAgrE

The Institution of Agricultural Engineers (IAgrE) was formed in 1938 *to promote the recognition of agricultural engineering as a profession, to foster the provision of adequate training of agricultural engineers, and to provide a channel for the conferment of professional status on the trained agricultural engineer.*

2. Vision

To be seen increasingly as the professional body of choice for engineers, scientists, technologists and managers working in agricultural and allied landbased industries, including forestry, food engineering and technology, amenity, renewable energy, horticulture and the environment.

3. Mission

The IAgrE aims to achieve this vision through being an effective provider of services that enhance the professional competence and status of engineers, technicians, technologists and scientists operating in the landbased sector by:

- Providing relevant and credible academic and professional qualifications for all
- Facilitate learned society activities including:
 - Publishing relevant research material through Biosystems Engineering
 - Promoting excellence in research
- Facilitating access to CPD
- Representing members interests on critical issues
- Providing a constant network of fellow professionals
- Developing and maintaining educational, professional and continuing development standards
- Maintaining a focus on the sustainable management of the global environment whilst balancing that focus with sustainable use of natural resources.
